Recruiting Team
BASF Corporation
Florham Park, NJ

Dear Hiring Committee,

I'm excited to apply for the Data Science PDP Internship at BASF for Summer 2026. As a Computer Science and Data Science student at Rutgers, I've been drawn to roles where I can solve real-world problems with data-and BASF stands out as a place where that kind of work truly makes a difference.

After talking to a few current PDP interns, what really stood out to me is how the program is structured. Even though BASF is a large global company, the internship offers the chance to work within smaller, focused teams where your work actually matters. That balance of big-picture impact and close-knit collaboration really appeals to me.

In past internships, I've worked on projects involving predictive modeling, NLP, and data analysis across the insurance and healthcare spaces. I enjoy working with messy data, asking the right questions, and collaborating with others to build something useful. I'm excited by the chance to bring those skills into a new space, learn from BASF's teams, and contribute to meaningful projects.

Thanks for considering my application. I'd love the opportunity to be part of the BASF team next summer.

Sincerely, Dhruv Naruka
